Correction: *Cold agglutinins in a patient undergoing normothermic cardiac operation with warm cardioplegia*

In this article, figures 1 and 2 were incorrect. The correct figures are below:

Figure 1 Recommendations for preoperative testing and haematology consultation in patients with benign cold agglutinins and cold haemagglutinin disease. Reproduced from Barbara *et al.* 1

**Cold agglutinins in a patient undergoing normothermic cardiac operation with warm cardioplegia**

CA, cold agglutinins; CHAD, cold haemagglutinin disease; CPB, cardiopulmonary bypass.

**Cardiac surgery requiring CPB in a patient with CA or CHAD**

- **Benign CA**
  - (Asymptomatic patient without history or evidence of cold-induced haemolysis or agglutination)
  - Avoid systemic hypothermia and cold cardioplegia without additional testing related to CA.
  - or
  - If systemic hypothermia or cold cardioplegia are required, CA titre + thermal amplitude with consideration of haematology consultation given planned surgery and laboratory results.

- **CHAD**
  - (History or evidence of haemolysis or agglutination)
  - CA titres, thermal amplitude, and haematology consultation for consideration of preoperative treatment to decrease CA titres.
**Figure 2** Guidelines for managing patients with cold antibodies who undergo cardiovascular operation. During the preoperative visit, the patient must be evaluated for a history suggestive of pathogenic cold antibodies. Reproduced from Sapatnekar and Figueroa.\(^2\) AHG XM, anti-human globulin crossmatch; RBC, red blood cell.
